Lockout/Tagout Requirements

The Occupational Safety and Health Administration (OSHA) has mandated that all energy sources be turned off and locked out to protect employees from injuries caused by the accidental startup of equipment under repair or service. This is outlined in OSHA standard 29CFR 1910.147.

Panduit has developed a complete program to help you comply with these standards:

- Full line of lockout devices, tags, and signs for a variety of energy sources
- Compliance manuals to help you understand the regulations and implement a compliance program
- Training videos, interactive CD-ROM programs and handbooks for your employees

PANDUIT® Lockout/Tagout Compliance and Training Products

OSHA Compliance Manual

The Lockout Compliance Manual takes you step-by-step through the process of bringing your company into compliance with OSHA Standard 29CFR 1910.147.

Topics covered:

- Background, scope and purpose of the regulation
- Process of developing a lockout/tagout plan
- How to write your company's lockout/tagout policy
- Establishing lockout/tagout procedures for equipment in your plant
- Implementing a lockout/tagout training program

Also included:

- Forms to administer your program
- Sample programs and procedures

ISO Labels - Warning Labels

- The International Organization for Standardization (ISO) has established a system to communicate safety information without the use of words. This is accepted in most countries worldwide. Colors and shapes recognizable worldwide are prescribed.

ISO symbology for "Risk of Danger" is a triangle (using black and yellow as its primary colors) to denote "WARNING." The symbols below are those generally accepted as usable without supplementary signs to explain the essence of the message.

- Ref. ISO 3864 (DIN 40008, DIN 4844)

Part Number	Legend	Description	Triangular Length In. (mm)	Markers Per Card	Material	Std. Pkg.*
